

Your Data is Your Competitive Edge

Harness The Power of Your Enterprise Data

InterSystems® Data Fabric Studio™ with asset management module enables firms to create a single, trusted, and real-time source of truth from all of their disparate enterprise data sources. This solution makes it faster and easier to prepare data for launching new products, accelerating AI initiatives, managing risk, monitoring performance, and delivering differentiated client experiences.

A Unified Solution for Asset Management Firms

InterSystems Data Fabric Studio is a self-service, fully-managed solution designed for data analysts, data stewards, and data engineers. It allows them to easily access the data they need, minimizing reliance on developer resources and accelerating time to value.

The solution is fundamentally different from data warehouses, data lakes/lakehouses, and data marts, while complementing and connecting with all of them. It enables firms to create a smart data fabric architecture that connects to live data from the source, integrates, and transforms data with business rules, and applies AI and analytics, delivering high-quality, consistent and trusted data to all data consumers.

Connect Everything, Solve Anything

Lower total cost of ownership with a solution that can integrate and transform any type of data, and create a data ecosystem to serve multiple use cases:

- Enhance marketing and distribution
- Accelerate product launches
- Launch AI initiatives
- Enhance risk and performance
- Simplify AUM and client reporting
- Streamline back-office operations

**“WE IDENTIFIED
INTERSYSTEMS AS
ONE OF THE ONLY
VENDORS THAT HAD
ALL OF THE DIFFERENT
CAPABILITIES NEEDED
TO BUILD A SMART DATA
FABRIC.”**

*Rajib Nandi,
Head of Data Analytics,
Harris | Oakmark*

Key Benefits

Non-Disruptive

- Complements existing infrastructure
- Connects to new and legacy systems, including data warehouses, data lakes, and lakehouses

Auditable with Historical Store

- Full change history and historical data store
- Satisfies business, client, and compliance requirements

Cloud-Native & Fully Managed

- Fully managed in major cloud providers
- Manage only the processes you want, we do the rest

Secure & Reliable

- Proven security and reliability for all your mission-critical applications

The InterSystems Difference

Minimize Data Duplication

Integrate and orchestrate data and services from the source, inside and outside of the organization, on-premises or in the cloud, without making additional copies of data.

Real-Time Data

Connects to data at the source as it is requested, ensuring decisions are made with the most timely data.

Universal Translator

All users, applications, and systems can access the same copy of data in the structure and format most appropriate to their needs and access privileges. This ensures that data quality and consistency remain high.

Fast Time to Value

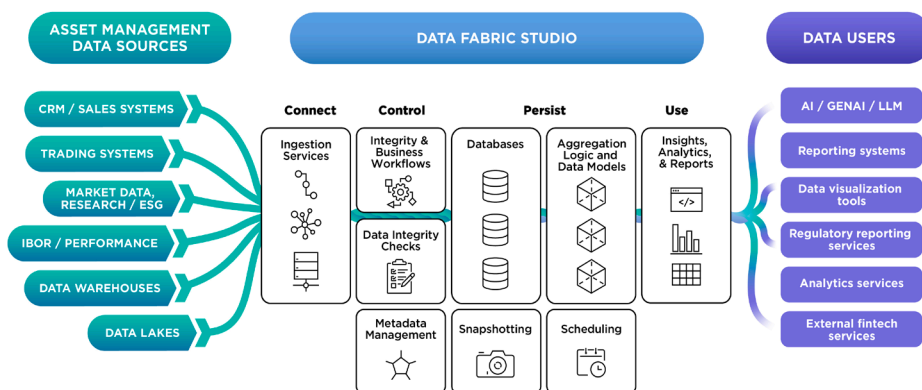

Self-service solution that enables you to launch your first project within 3 months of implementation.

A New Approach to Data Management

InterSystems Data Fabric Studio is built on our smart data fabric architecture. It connects to live data from the source, integrates and transforms data with business rules, and applies AI and analytics, delivering high-quality, consistent and trusted data to all consumers.

Our unified solution offers all the capabilities necessary to create and maintain a smart data fabric, eliminating the cost and complexity of provisioning, integrating, and maintaining multiple data management products.

It includes **asset management-specific data connectors** to the most widely used applications and market data sources. It also includes a **customer extensible data model** that can be easily updated and maintained by non-developers.
