

The Bedrock of Innovation for Fintechs and Data Providers

An essential technology partner for fintechs and data providers that power the financial services industry.

Build for Tomorrow

Whether you offer portfolio management software or build custom software solutions for financial services firms, InterSystems is your essential technology partner. We help data and analytics providers and fintech firms power wealth management software, launch new data products, build regulatory compliance software, develop new AI-based products, and modernize legacy infrastructure to boost performance.

Our modern approach to data management is deployment agnostic. Our all-in-one data platform eliminates the need to duplicate data among multiple data management services, delivering higher performance using less infrastructure. Our solutions enable fintechs and data providers to easily create and maintain a **smart data fabric**, develop and launch **generative AI** solutions, and seamlessly integrate their applications into a client's environment via a **cloud fintech gateway**.

With seamless integration and interoperability, InterSystems is the bedrock of financial innovation.

The InterSystems Difference

Accelerate Time to Market

Our next-generation cloud-native platform provides all of the data management, integration, and analytics capabilities you need, eliminating the requirement to provision, integrate, and manage dozens of different products and services.

Fast, Secure, and Reliable

Accesses, integrates, and transforms data as it's being requested in a secure, low latency environment, built on a data platform designed for high-performance mission-critical applications.

Simpler Architecture

Compared to other leading platforms, customers experience 9X better performance running on only 30% of the infrastructure, leveraging a smart data fabric approach.

Deployment Agnostic

Build once and deploy in the environment of your, or your clients' choice. Our technology can be deployed on premises, in the cloud, or hybrid.

Innovation, Integration, and Efficiency

Generative AI and Machine Learning

Maintain your competitive advantage with generative AI-based solutions that utilize your, or your client's proprietary data in a controlled and secure environment. Perform vector search, retrieval-augmented generation (RAG), and AI orchestration natively on our data platform technology. Test and operationalize models from development into production using the same source of timely, unified data. [Learn more.](#)

Smart Data Fabric

Build solutions using live data from inside and outside of your organization with a smart data fabric. Dubbed "the future of data management" by Gartner®, an enterprise data fabric is a new architectural approach that speeds and simplifies access to data across data lakes, data warehouses, data clouds, data lakehouses, applications, documents, and other sources. InterSystems takes this approach further by embedding a wide range of AI-enabled capabilities that make it faster and easier to gain new insights, enhance predictive or prescriptive analytics, and build applications using unified, timely, and consistent data (a smart data fabric). [Learn more.](#)

Cloud Fintech Gateway

Integrate innovative banking, compliance, secure payment solutions, and other fintech apps with client production systems faster and more seamlessly using a real-time, bidirectional gateway. It enables real-time integration with your clients' existing legacy systems, production applications, and data sources that are either on premises, in the cloud, or both. [Learn more.](#)

Our Products are Designed for Flexibility and Scalability

Our solution suite is designed to tailor to client needs. Whether you're building a data-intensive application or want to simplify data management, InterSystems can help.

InterSystems IRIS

InterSystems IRIS® is a high-performance data platform designed to make it easy to build applications that support mission-critical processes by connecting live data across disparate systems and silos.

InterSystems Data Fabric Studio

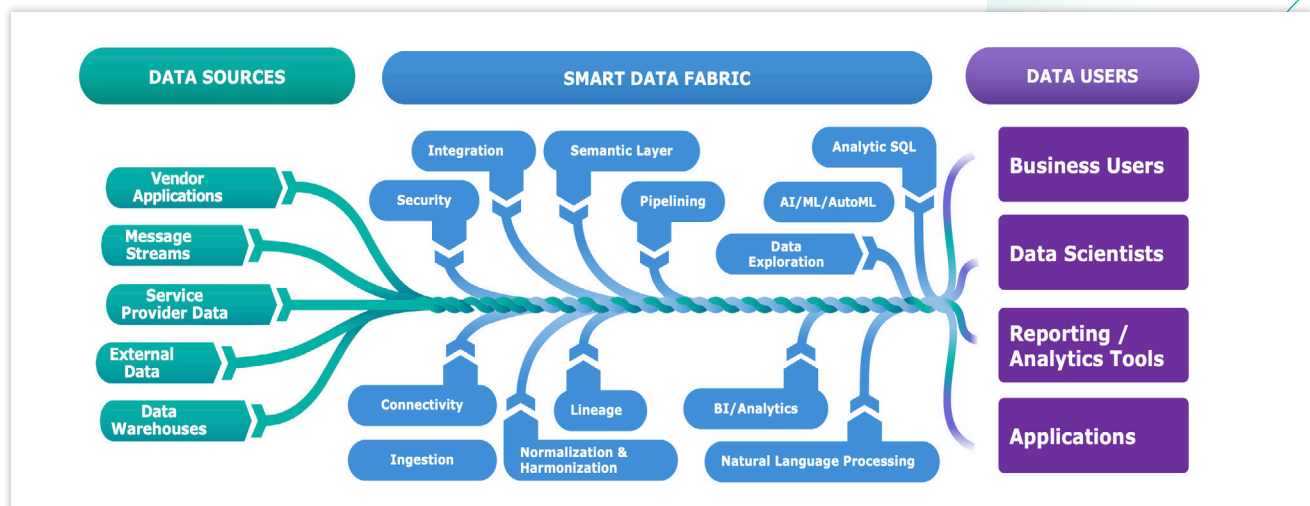

InterSystems® Data Fabric Studio™ is a fully managed solution that streamlines access to data across silos via self-service cloud software, delivering a single source of trusted data to all consumers.

InterSystems TotalView For Asset Management

InterSystems TotalView™ For Asset Management is tailor-made to simplify access to all enterprise data for asset managers without the need for developer resources.

Unlocking the True Potential of Your Data

Dubbed “the future of data management” by Gartner®, an enterprise data fabric is a new architectural approach that speeds and simplifies access to data assets across data lakes, data warehouses, data clouds, data lakehouses, applications, documents and other sources. InterSystems takes this approach further by embedding a wide range of AI-enabled capabilities that make it faster and easier for financial services firms to gain new insights and enhance predictive or prescriptive analytics (a smart data fabric).

A smart data fabric addresses limitations of traditional data management approaches, offers real-time insights, incorporates diverse data sources, and remains flexible to changes, revolutionizing digital transformation.

Why InterSystems?

InterSystems is a leader in data management technology used by thousands of clients globally to build and run mission-critical, data-intensive applications. Banks, asset managers, and financial technology firms rely on InterSystems to run trade order management systems, wealth management platforms, regulatory reporting engines, business reporting, and many other use cases.

InterSystems is recognized as the sole Challenger in the 2023 Gartner® Magic Quadrant™ for Cloud Database Management Systems, a Strong Performer in The Forrester Wave™: Enterprise Data Fabric, Q1 2024, and as an Exemplary Vendor in the Ventana Research Data Platforms Value Index 2023.

InterSystems is committed to excellence through its award-winning, 24/7 support for customers and partners in more than 80 countries.
