Get the Answers You Need, Faster

Ask questions in plain language and get answers through simple, self-service AI chat

InterSystems AI Enables Insights Across Any Enterprise Data

Healthcare leaders face constant pressure to improve margins, manage resources, expand access, and maintain operational performance. Making informed decisions requires understanding not only what is happening, but why, and what actions could make a difference.

Yet the answers are often scattered across financial, workforce, scheduling, capacity, and other enterprise systems. Even straightforward business questions can require multiple reports, spreadsheets, and requests to data teams.

Leaders need to answer questions such as:

- Where are we losing margin, and what is driving it?
- Can we meet demand without adding labor or fixed costs?
- Which services or locations face the greatest risk of disruption?
- Where is demand outpacing available access?
- What is preventing us from making better use of existing capacity?

Getting answers shouldn't require a new reporting project every time a question arises.

Self-Service AI Chat, Backed by Trusted Enterprise Data

InterSystems Data Studio™ with AI Assistant gives authorized users a simple, conversational way to explore complex information.

Leaders can ask questions in plain language, receive understandable answers, examine the supporting information and reasoning, and ask follow-up questions to explore what is driving performance, all through a familiar chat experience.

Every answer is powered by InterSystems Data Studio; it brings together data from across the enterprise, applying shared definitions, governance, and security so teams can work from consistent, traceable information.

Rather than building a new report or data pipeline for each question, organizations can create trusted, reusable data assets that support self-service AI insights, existing BI tools, and other analytics needs.

The result: a simpler way to explore complex enterprise information and make more informed decisions, faster.

InterSystems®
Creative data technology

Explore complex financial and operational questions through simple, self-service AI chat — with trusted enterprise data behind every answer.

Support Healthcare Priorities:

InterSystems Data Studio provides a flexible foundation for building trusted data assets around an organization's specific priorities. Healthcare organizations can apply it to use cases such as:

1. **Workforce Capacity and Access Optimization**
   Build a governed view of demand, staffing, skills, capacity, utilization, transfers, and discharge data to help leaders identify imbalances, align resources with demand, and evaluate opportunities to improve access.
2. **Operational Resilience and Disruption Management**
   Bring together workforce, facilities, equipment, technology, vendor, logistics, and external-risk data to help leaders assess vulnerable services, understand the potential impact of disruptions, and prioritize continuity planning.
3. **Network Access and Demand Optimization**
   Combine scheduling, referrals, demand, provider availability, cancellations, operating hours, location capacity, and market data to help leaders identify access gaps and evaluate how available resources could be better deployed.

Business Value at a Glance

Get answers through self-service AI: Ask complex financial and operational questions in plain language, explore follow-up questions, and access understandable answers without waiting for a new report.

Make decisions with greater confidence: Explore the information and reasoning behind answers, supported by connected enterprise data, consistent definitions, and traceable sources.

Increase productivity: Spend less time requesting reports, reconciling spreadsheets, and preparing one-off analyses and more time understanding performance and identifying opportunities for improvement.

Reuse data instead of rebuilding: Connect, prepare, and govern data once, then reuse trusted data assets across questions, departments, dashboards, applications, and analytics.

Build on existing investments: Deliver governed data to existing warehouses, lakehouses, cloud platforms, BI tools, applications, and workflows while extending access through Data Studio AI Assistant and Adaptive Analytics.

The InterSystems Difference

InterSystems brings decades of experience supporting complex, regulated, mission-critical healthcare data environments. InterSystems Data Studio combines that expertise with a fully managed, low-code approach to connecting and governing enterprise data, while Data Studio AI Assistant makes that information more accessible through conversational AI.

Together, they provide a simple self-service experience supported by the reliability, consistency, and governance healthcare organizations require.

Learn how InterSystems Data Studio can help your organization get trusted answers to complex operational questions through self-service AI.
