

InterSystems IRIS for Health™

Version 2020

Statement Publication Date: 7/1/2020

InterSystems IRIS for Health™ is a complete healthcare platform, built around a high-performance database, that enables the rapid development and deployment of data-rich and mission-critical healthcare applications. It's a comprehensive platform spanning data management, interoperability, transaction processing, data normalization, and analytics.

IHE is an initiative by healthcare professionals and industry to improve the way computer systems in healthcare share information. IHE promotes the coordinated use of established standards such as DICOM and HL7 to address specific clinical need in support of optimal patient care. Systems developed in accordance with IHE communicate with one another better, are easier to implement, and enable care providers to use information more effectively.
