

Scale Globally with InterSystems

Why InterSystems

Designed for Healthcare.
Purpose-built for mission-critical, highly regulated digital health applications

Global Expertise.
Unmatched healthcare data standards and compliance experience

Proven Technology.
Interoperable, reliable, scalable, and secure

Trusted AI.
Clean, consistent, healthy data for analytics and analysis

Global Reach.
37 locations in 28 countries, 24 X 7 support

Industry Leader.
Recognized by Forrester, Gartner, IDC, and KLAS Research

The Gold-Standard Partner for International Expansion

Digital health innovators, MedTech companies, healthcare delivery organizations, and life sciences firms are pursuing international markets to grow revenues and boost business results. The opportunity is clear. But so are the barriers to entry.

Expanding internationally means overcoming complex interoperability, compliance, and technology challenges. For healthtech organizations with global ambitions, choosing the right technology partner is fundamental.

InterSystems has the proven technology, domain expertise, and global resources to help your business succeed. From the earliest days of health IT, the industry has relied on and grown with InterSystems. Globally, more than one billion health records are managed by solutions built on InterSystems technology.

Purpose-Built for Healthcare

Unlike general-purpose data management platforms, our solutions are specifically designed for the high-stakes, highly regulated world of medical data. Our platforms break down interoperability barriers, enabling data to flow freely, securely, and reliably between systems and across borders at high speed and scale. We help healthtech companies accelerate time-to-value, reduce integration cost and complexity, and deliver clean, consistent, and trusted data for AI.

InterSystems has decades of experience advancing global healthcare interoperability standards like HL7® FHIR®, and we are actively involved with new frameworks like the European Health Data Space regulation. We don't just understand today's regulatory landscape; we understand where global and local standards are heading tomorrow.

Trusted by Leading Healthcare Systems and Healthtech Companies

Our technology powers large-scale health systems all over the world like the U.S. Department of Veterans Affairs network and Australia's national health system. We also have deep experience integrating with national systems such as the National Health Service Spine in the United Kingdom and Kanta in Finland. Leading healthcare solution providers like Epic, 3M, and Medtronic rely on InterSystems to streamline development and integration efforts and move up the value chain. And top industry analysts like Forrester, Gartner, IDC, and KLAS Research routinely recognize InterSystems as a healthcare technology market leader and innovator.

Global Presence and Local Expertise

Privately held and in business for nearly 50 years, InterSystems has 25 offices worldwide and provides award-winning, 24x7 support for customers and partners in more than 80 countries. Our global presence ensures that you have access to local expertise, regional insights, and the operational support required to succeed internationally.
