

# Businesses feel overwhelmed by data, are you one of them?

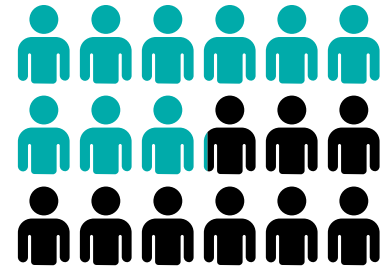

As businesses generate increasing amounts of data, accessing data quickly has become a problem often leaving organisations unable to make fast decisions to drive their business forward in rapidly evolving landscapes.

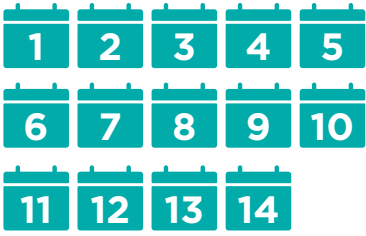

67% of organisations struggle to access data to make critical business decisions.

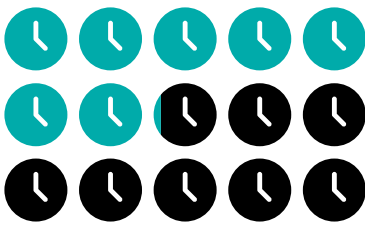

## Other data-related issues:

51% are overwhelmed by data

It typically takes businesses up to **two weeks** to analyse data

53% waste time planning data collection by which time it's outdated

## Business moves *fast*. Ensure your organisation can keep up.

Many of these problems stem from enterprises being unable to determine which of their applications have the relevant data and can be solved by implementing a data platform that offers:

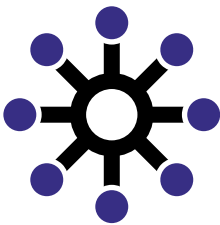

### Speed

Access data quickly to improve the decision-making process and deliver value to your customers faster

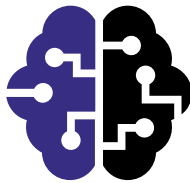

### Scalability

Keep up with the increasing amounts of data your business generates

### Interoperability

Eliminate siloes and connect all data sources, processes and applications

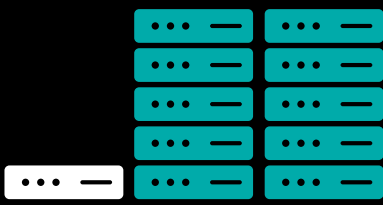

### AI and ML

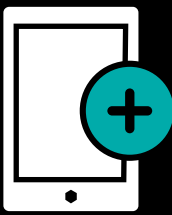

Intelligent tools help you access and analyse your data in real-time

## Making sense of your data with InterSystems IRIS

InterSystems IRIS Data Platform offers speed and scalability using AI and ML to help you access and analyse your data in real-time.

Handles up to **10x more data** than in-memory databases

Integrated ML allows developers to **easily add automation and predictions** to applications

Up to **200x faster** than competing platforms
