# UK Developers: Under Pressure and in Need of Support

By 2030, the number of software developers globally is due to almost double.

InterSystems research found that **87%** of developers feel they work in a pressured environment. While **96%** of developers feel they make an important contribution to the wider business, are they getting the access to the resources and support they need?
The main sources of developer stress

59% of developers say project deadlines are the most stressful part of the job

49% find balancing workloads challenging

47% say it's 'changing project requirements'

55% are reluctant to tell their manager if they feel overworked

The impact of COVID-19 on the developer experience

While working remotely, developers have faced some new challenges:

15% have found it has been difficult to try and manage expectations

**31%** have had trouble communicating with relevant stakeholders or colleagues

11% say the biggest challenge has been processes taking longer

There are simple ways to improve developers' workplace wellbeing

46% of developers think stress could be lessened by flexible working times

43% would welcome extra resource and tools to automate processes as well as access to online communities

Supporting developers with InterSystems IRIS

InterSystems IRIS Data Platform offers developers speed and simplicity, using IntegratedML to help developers build enterprise-class applications faster and easier than ever before:

Automate processes and reduce development time

Utilise machine learning technology without needing additional expertise and resources

Rapidly connects people, processes, and applications, therefore reducing time and required effort

Flexible cloud deployment options enabling the development, deployment and maintenance of real-time, data rich solutions

Scale effortlessly to reduce performance problems

Development in the language of your choice

Easy access to resources, free online learning and certification program

Communities for developers to share resources, insights and challenges with peers
