

HealthShare Health Connect

Version 2018
Statement Publication Date: 7/11/2018

HealthShare Health Connect is an enterprise service bus (ESB) created specifically for healthcare. It provides integration and interoperability based on global healthcare information protocols and messaging formats. Healthcare enterprises can use it as a foundational health ESB, and software developers can use it to add standards-based interoperability to their own products.

IHE is an initiative by healthcare professionals and industry to improve the way computer systems in healthcare share information. IHE promotes the coordinated use of established standards such as DICOM and HL7 to address specific clinical need in support of optimal patient care. Systems developed in accordance with IHE communicate with one another better, are easier to implement, and enable care providers to use information more effectively.
